

Wellbeing Consult

Australian startup Wellbeing Consult needed a telemental health platform to provide greater access to mental health care regardless of location.

The Needs

When Wellbeing Consult saw the need to leverage technology for greater mental health care access, they turned to WebRTC.ventures for help with designing and building their platform.

A secure telehealth application

Live video appointments

Appointment scheduling

Directory of mental health providers with search functionality

Secure messaging

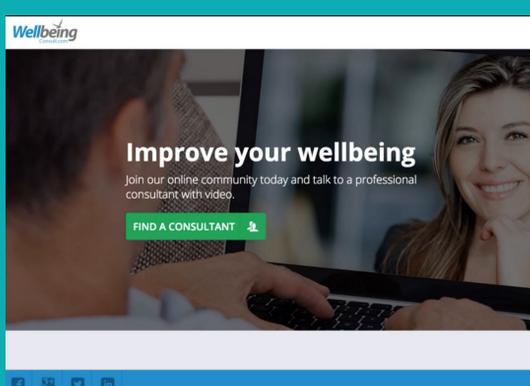

Secure file- and image-sharing during appointments

Live user presence

Billing and payment processing

How We Helped

Here is how our team at WebRTC.ventures helped

Our team at WebRTC.ventures designed and built a secure and responsive web application with an intuitive design, secure authentication, and backend APIs. We used AWS for automatic deployments, creating an efficient deployment process.

Additionally, we worked with Wellbeing to create branding that represents their innovative work and company values.

Three Phases to Approach the Challenge

Phase 1

We created a minimum viable product (MVP) with live video appointments, a directory, billing, and payment processing.

Phase 2

We made improvements to the existing functionality to create a seamless experience for all users. This included UI improvements, billing refinements, and live presence implementation.

Phase 3

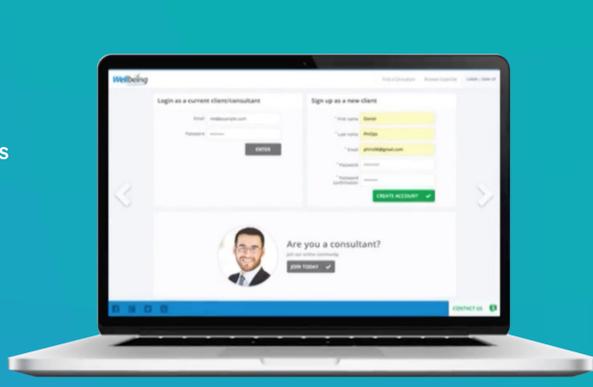

We completed further branding and DevOps work for Wellbeing Consult's application.

The Solution

Wellbeing Consult is a secure telemental health application that connects users to mental health professionals quickly and easily. With features like messaging, file-sharing, and payment processing, this application brings mental health care directly to users when and where it's convenient for them.

We used the following frameworks and technologies:

- WebRTC
- Pubnub
- Ruby on Rails
- OpenTok
- Stripe

Wellbeing Consult received overwhelmingly positive feedback when they displayed their telemental health platform at a large mental health conference in Australia.

Customer Satisfaction

From 1 to 3, with 3 being the best:

3

How would you **RATE YOUR EXPERIENCE** with WebRTC.ventures?

3

How **KNOWLEDGEABLE** was WebRTC.ventures in solving your pain points?

“Once a week, we get together and the team shows all the new features that have been built in that week, so it was a really exciting time. You can see all the hard work all coming together and the vision becoming a reality in front of your eyes, week by week.”

Dr. Marty Brewster
